The Texas Traffic Records Coordinating Committee (TRCC) is a partnership of representatives from the transportation, law enforcement, criminal justice, and health professions. This statewide group of stakeholders uses the TRCC as a forum for the planning, coordination and implementation of projects to improve the State's traffic records system.

The TRCC uses Federal "State Traffic Safety Information System Improvement Grants (405c)" and other funds to promote projects to improve the accessibility, accuracy, completeness, consistency, timeliness, and uniformity of the traffic records systems in Texas. These projects include efforts to improve individual databases as well as to promote linkages between the core traffic records systems through the development of interfaces to improve direct business needs and integration to improve data analysis.

The Executive Texas TRCC includes members representing the six core traffic records databases in Texas:

Core Traffic Records Data

Crash Data

The [Texas Department of Transportation's \(TxDOT\) website](#) allows users to view Annual Summary Reports, create queries using the CRIS Query Tool, submit a request for publicly available data, or download extract files of large data sets.

Law enforcement agencies using TxDOT's CRASH website for crash report submission may also receive free access to MicroStrategy, which is a business intelligence tool to analyze crash data. Information on MicroStrategy training can be found [here](#), and information on which pre-made canned reports are available can be found [here](#).

Vehicle Data

Users can submit a request for vehicle data through the [Texas Department of Motor Vehicle's \(TxDMV\) website](#). Note, there is a fee depending on the number of records requested.

Texas Department of Public Safety

Driver Data

Public data request forms can be found on the [Texas Department of Public Safety's \(TxDPS\) website](#). Additional aggregated public driver license data can be found [here](#).

Roadway Data

The roadway inventory can be accessed on [TxDOT's website](#).

Texas Department of Public Safety

Citation Data

Online data requests can be found on [TxDPS' website](#). DPS also [publishes](#) de-identified traffic stop data which can be downloaded by month and analyzed.

TEXAS Health and Human Services

Texas Department of State Health Services

Injury Surveillance

Publicly available data can be accessed on [Department of State Health Services' \(DSHS\) website](#).

Data Driven Safety: The Problem

Road to Zero needs crashes to be reduced statewide

- Eliminate all fatalities by the year 2050
 - Texas Transportation Commission: May 30, 2019
- National Roadway Safety Strategy
 - Secretary Buttigieg: “...only acceptable number is zero...”

Data Driven Safety: Moving Forward

Traditional Approach

- Count total crashes to identify critical areas
- Produce crash count “hot spot” maps
- Highly correlated with highly populated / high traffic areas

Figure 6. Motorcycle Crashes, 2020.

Hot Spot Map for Motorcycle Crashes

TxSTORM

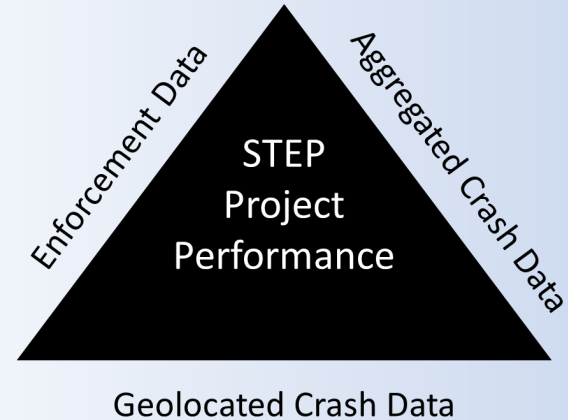

Texas State Trend Over-Representation Model

A multi-agency product of the Texas Traffic Records Coordination Committee designed to identify crash-related trends and facilitate the efficient deployment of resources.

Data Driven Philosophy

- Establish the “average” year for each reporting jurisdiction
 - 3-year baseline vs current trend
 - Lessens impact of anomalies
- Identifies & measures adverse trends
 - Measures difference between local & statewide trends
 - Forecasts net change between baseline & year-to-date data
 - Single numerical value expresses relative impact of local trend

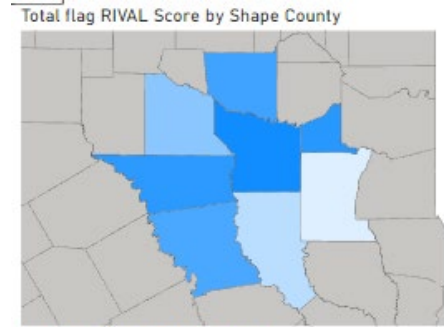

Triangulating STEP Data

STEP: Selective Traffic Enforcement Program

TxSTORM

- Provides basis for setting achievable targets
- Supports program design & implementation
 - Where should we put our resources?
 - Are we contributing to a positive change?
- Useful for more than STEP!

TxSTORM

Texas State Trend Over-Representation Model

Summary

Strengths

- Shows near-real time trends with regular updates
- Excellent “screening” tool
- Diagnose traffic safety problems
- Guide resource deployment/actions
- Provides overall & specific crash types

Limitations

- Trends changes may not be causal
